## Junior Test 2 Question 4

- $(n-1)(n+1) = 5 \cdot 2^m$  1 mark
- m > 0, so both factors are even **1 mark**
- gcd is 2, so one divisible by at most 2 1 mark
- n-1=2 or n-1=10 or n+1=2 or n+1=10 and see which cases give solutions  $\boxed{\mathbf{3} \text{ marks}}$
- n = 9, which gives m = 4. Must give m or loses a mark. 1 mark
